

ATM™ Adapter Plate Fitting Guide

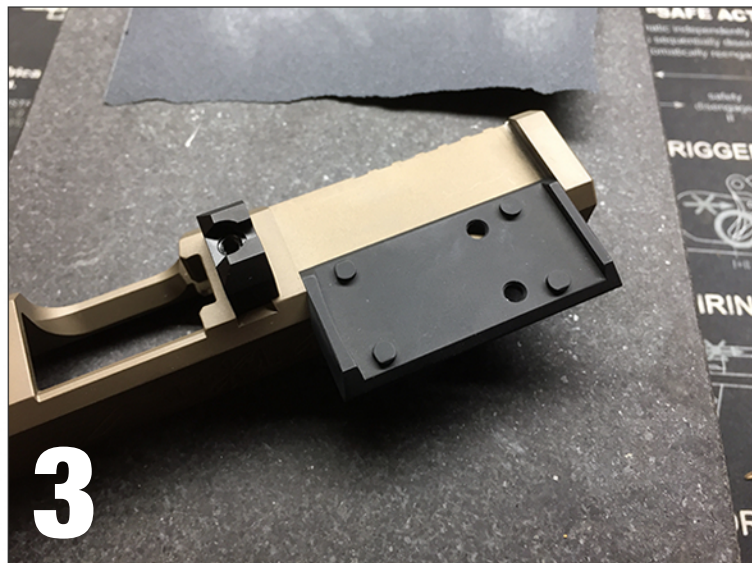

1

If adapter plate requires fitting, just grab a piece of fine grit sandpaper (320-600) and a flat surface to work on.

2

Keeping the sandpaper flat, carefully rest the adapter on its dovetail face and rub along the sandpaper using light pressure, careful to keep the dovetail surface flat and at the correct angle.

3

Clean the adapter plate and test fit after every 4-5 passes on each dovetail surface. The plate should fit snug and offer slight resistance while inserting into the slide dovetail.

4

That's it. Finish installing the adapter, crack open a cold one and bask in the glory of your awesomeness.
