One (1) ModButton™ Lite Control Module
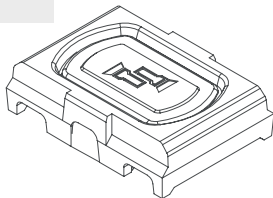

One (1) Rail Clamp A (Round Holes, Logo)

One (1) Rail Clamp B (Hex Holes, Cable Notch)

UNITY
PAT. PEND

Two (2) Cross Bolts

Two (2) Hex Nuts

**1** Place the ModButton™ Lite Control Module on the M1913 Rail in desired location.

2 Align the Rail Clamps along the side of the ModButton™ Lite Control Module. Ensure the logo on Rail Clamp A is upright. Align Rail Clamp B on the side of the ModButton™ Lite Control Module with the cable.
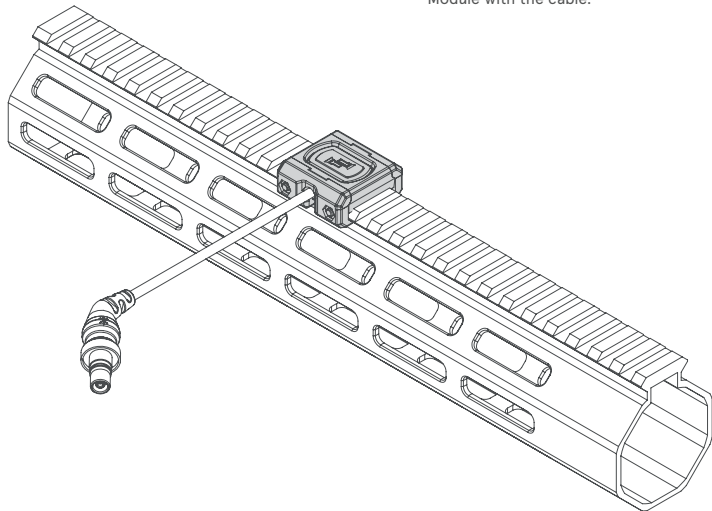

3 Fully seat the Hex Nuts in the recesses in Rail Clamp B.

4 Thread the Cross Bolts in the circular holes in Rail Clamp A via the pass-through and into the Hex Nuts in Rail Clamp B. Finger tighten both before applying torque to either. **Torque to 5 in-lbs (0.57 Nm).**

5 Route cable from ModButton™ Lite to device and fully seat plug in socket. Avoid sharp bends and routing over extreme heat areas and sharp edges.
